KEVICC Key Stage 4 Curriculum Subject: Mathematics			Key Vocabulary and notation.	
	Spring Half-Term	Pythagoras'	Trigonometry	
Term: Year 10 Spring Term – Block Seven Topic: Pythagoras Theorem and Trigonometry			Angle	
What is the essential knowledge from this unit? What do students need to remember and understand?				
iidi de	sidens need to remember and understand:	Formula Right Angle	Lengths Relationship	
	Specification content Specification notes	Adjacent	Trigonometric	
		1		
G20	Know the formulae for: Pythagoras' theorem, $a^2 + b^2 = c^2$, and the trigonometric ratios,	Opposite	ratio	
	opposite adjacent opposite	Hypotenuse	Square	
	$\sin \theta = \frac{opposite}{hypotenuse}$ $\cos \theta = \frac{adjacent}{hypotenuse}$ $\tan \theta = \frac{opposite}{adjacent}$	Right Angle	Square root	
	apply them to find angles and lengths in right-angled triangles in two dimensional figures	Triangle	Sum	
		Non right-	Total	
	nts should be able to: nderstand, recall, and use Pythagoras' theorem in 2D problems	angle triangle	Substitute	
understand, recall, and use trigonometric relationships in right-angled triangles		3 dimensional	Expression	
	se the trigonometric relationships in right-angled triangles to solve problems, including those volving bearings.	Formula	Calculate	
		Rearrange Proof		
G20h	Know the formulae for: Pythagoras' theorem, $a^2 + b^2 = c^2$, and the trigonometric ratios,	Subject	Prove	
	opposite adjacent opposite	Subject of		
	$\sin \theta = \frac{opposite}{hypotenuse}$ $\cos \theta = \frac{adjacent}{hypotenuse}$ $\tan \theta = \frac{opposite}{adjacent}$	formula	Exact value	
	apply them to find angles and lengths in right-angled triangles in two- and three-	Sine	Simplifying	
	dimensional figures	Cosine	$\sin \theta \sin^{-1} x$ $\cos \theta \cos^{-1} x$	
UI	nderstand, recall, and use Pythagoras' theorem in 3D problems nderstand, recall, and use trigonometry relationships in 3D problems se these relationships in 3D contexts, including finding the angles between a line and a lane.	Midpoint Perpendicular	Slope Diagonal	
G21	Know the exact values of $\sin \theta$ and $\cos \theta$ for $\theta = 0^{\circ}$, 30° 45°, 60° and 90° Know the exact value of $\tan \theta$ for $\theta = 0^{\circ}$, 30° , 45° and 60°	Mathematical questioning should be designed to unpick the structure of the maths and deepen the student's		
Students should be able to: recall exact values of sine, cosine and tangent for 0°, 30°, 45° and 60° recall that sin 90° = 1 and cos 90° = 0 solve right-angled triangles with angles of 30°, 45° or 60° without using a calculator.		understanding. When students talk about mathematical concepts, they should develop the vital mathematical langua that helps them explain their		
G6	Apply angle facts, triangle congruence, similarity and properties of quadrilaterals to conjecture and derive results about angles and sides including Pythagoras' Theorem and use known results to obtain simple proofs	ideas fully. Students are expected and encouraged to use terminolog		
• UI	nts should be able to: nderstand similarity nderstand similarity nderstand similarity of triangles and of other plane figures, and use this to make geometric	during all discuss feedback and ir		
id e	Inferences Identify shapes that are similar, including all squares, all circles, or all regular polygons with a qual number of sides Identify shapes when rotated, reflected or in different orientations apply mathematical reasoning, explaining, and justifying inferences and deductions			
• sh	now step-by-step deduction in solving a geometrical problem rate constraints and give starting points when making deductions.			
R12	Compare lengths using ratio notation; Make links to trigonometric ratios			
• UI • UI	nts should be able to: nderstand the effect of enlargement on perimeter nderstand the effect of enlargement on areas of shapes nderstand the effect of enlargement on volumes of shapes and solids ompare the areas or volumes of similar shapes			

What prior learning supports understanding of this content?

- Identify 2-D shapes with 3-D shapes.
- Understand the language of faces, edges, and vertices.
- Calculate squares and square roots.
- Substitute numerical values into formulae and expressions.
- Identify the hypotenuse of a right-angled triangle.
- Determine whether a triangle is right-angled.
- Calculate missing sides in right-angled triangles.

Reading: Where in the unit are students supported to read complex academic text?

- Reading and understanding mathematical questions and problems' - teacher input.
- Decoding complex examination questions explain what they are asking the student to do' - teacher input.
- Following instructions to solve problems break down the tasks - teacher input.
- Recognising terminology, numbers, and symbols.

How does this content link to future learning?

- Compare lengths, areas and volumes using ratio notation, making links to similarity and scale factors.
- Know and apply the formulae to calculate the volume of cuboids and other right prisms (including cylinders).
- Calculate the volume of spheres, pyramids, cones and composite solids, including frustums.
- Calculate exactly with fractions, surds, and multiples of π ; simplify surd expressions involving squares (e.g. $\sqrt{12} = \sqrt{4 \times 3} = \sqrt{4} \times \sqrt{3} = \sqrt[2]{3}$) and rationalise denominators.

Writing: Independent writing tasks and how they are structured

- Using the correct subject specific terminology for numbers and symbols - examination papers, class books.
- Responding to questions that ask for an explanation or a reason examination papers, class books.
- Self-evaluation, reviewing, reflecting and analysis of own work class books, personalised learning checklists and analysis.
- Creating notes that can be used later for revision purposes class books, revision cards, mind maps etc.

Kev assessments:

How will do students review the information learned?

End of block assessments.
AQA end of block assessments provide a quick progress check at the end of each block of learning to make sure students have understood the content being covered. These are available for both foundation and higher tiers.

How will feedback be seen?

Marked end of block, term assessments and mock examinations.
Personalised learning checklists for all assessments identifying strengths and areas of development.
Written teacher feedback and marking in compliance with faculty and College Marking Policies. Student responses to marking. Students self-mark using purple pen. Verbal feedback given every lesson from teacher and peers as appropriate. Teacher and student self-assessment of presentation of class books will be completed to ensure written work is of high standard and students are achieving their potential.
