

KEVICC Key Stage 4 Curriculum Subject: Mathematics		Key Vocabulary and notation.															
Summer Half-Term																	
Term: Year 10 Summer Term – Block One		Topic: Simultaneous Equations															
What is the essential knowledge from this unit? What do students need to remember and understand?		Possible Meet Solution Eliminate Infinite Expression Finite Add Variables Subtract Equation Negative Substitute Equivalent Variable Coefficient Verify Multiplier Solve Lowest Solution common Unknown multiple Inverse Formulate Substitution Context Subject of Linear the formula Square Rearrange Intersection Simultaneous Non-linear equations Factorise Intersect Simplest form Coordinate In terms of

	Specification content	Specification notes															
A19	<u>Solve two simultaneous equations in two variables (linear / linear or quadratic/linear) algebraically</u> <u>Find approximate solutions using a graph including the approximate solution of a quadratic equation by drawing a straight line to intersect with another quadratic equation</u>																
Students should be able to: <ul style="list-style-type: none"> • solve simultaneous linear equations by elimination or substitution or any other valid method • find approximate solutions using the point of intersection of two straight lines. 																	
A21	<u>Translate simple situations or procedures into algebraic expressions or formulae; derive two simultaneous equations</u> <u>Solve the equations and interpret the solution</u>	including the solution of geometrical problems and problems set in context															
Students should be able to: <ul style="list-style-type: none"> • set up simple linear equations • rearrange simple linear equations • set up simple linear equations to solve problems • set up a pair of simultaneous linear equations to solve problems • interpret solutions of equations in context. 																	
What prior learning supports understanding of this content? <ul style="list-style-type: none"> • Simplify algebraic expressions. • Substitute numerical values into formulae and expressions. • Apply the four operations (+, -, x, ÷) to fractions. • Expand brackets and collect like terms. • Factorising expressions. • Form and solve one-step and two-step equations. • Understand equivalence of algebraic expressions. 		How does this content link to future learning? <ul style="list-style-type: none"> • Plot and interpret graphs (including reciprocal graphs) and graphs of non-standard functions in real contexts, to find approximate solutions to problems such as simple kinematics problems involving distance, speed, and acceleration. • Interpret the gradient of a straight line as a rate of change. 															
Reading: <i>Where in the unit are students supported to read complex academic text?</i> <ul style="list-style-type: none"> • Reading and understanding mathematical questions and problems' – teacher input. • Decoding complex examination questions - explain what they are asking the student to do' – teacher input. • Following instructions to solve problems - break down the tasks – teacher input. • Recognising terminology, numbers, and symbols. 		Writing: <i>Independent writing tasks and how they are structured</i> <ul style="list-style-type: none"> • Using the correct subject specific terminology for numbers and symbols – examination papers, class books. • Responding to questions that ask for an explanation or a reason – examination papers, class books. • Self-evaluation, reviewing, reflecting and analysis of own work – class books, personalised learning checklists and analysis. • Creating notes that can be used later for revision purposes - class books, revision cards, mind maps etc. 															
Key assessments: How will do students review the information learned? End of block assessments. AQA end of block assessments provide a quick progress check at the end of each block of learning to make sure students have understood the content being covered. These are available for both foundation and higher tiers. End of term/year assessments and mock examinations. End of term assessments assessing the students' progress towards targets and provide diagnostic information to modify future teaching. End of year 9 and 10 examinations assessing the students' progress towards targets and provide diagnostic information to modify future teaching. Two mock examinations seasons take place during year 11 using previous years AQA 8300 examination papers. Students to experience the full suite of papers at both Foundation and higher tiers using Non-calculator and Calculator requirements.																	

All examinations will explore the three examination papers at both foundation and higher tiers using non-calculator and calculator requirements.

How will feedback be seen?

Marked end of block, term assessments and mock examinations.

Personalised learning checklists for all assessments identifying strengths and areas of development.

Written teacher feedback and marking in compliance with faculty and College Marking Policies. Student responses to marking. Students self-mark using purple pen. Verbal feedback given every lesson from teacher and peers as appropriate. Teacher and student self-assessment of presentation of class books will be completed to ensure written work is of high standard and students are achieving their potential.
