

KEVICC Key Stage 4 Curriculum Subject: Mathematics		Key Vocabulary and notation.															
<b>Spring Half-Term</b>																	
<b>Term:</b> Year 9 Spring Term – Block Two	<b>Topic:</b> Sequences																
<b>What is the essential knowledge from this unit?</b> <b>What do students need to remember and understand?</b>																	
	<table border="1"> <thead> <tr> <th></th> <th>Specification content</th> <th>Specification notes</th> </tr> </thead> <tbody> <tr> <td>A23</td> <td>Generate terms of a sequence from either a term-to-term or a position-to-term rule</td> <td>including from patterns and diagrams</td> </tr> <tr> <td colspan="3">           Students should be able to:           <ul style="list-style-type: none"> <li>generate linear sequences</li> <li>work out the value of the <math>n</math>th term of a linear sequence for any given value of <math>n</math></li> <li>generate sequences with a given term-to-term rule</li> <li>generate a sequence where the <math>n</math>th term is given</li> <li>work out the value of the <math>n</math>th term of any sequence for any given value of <math>n</math></li> <li>generate simple sequences derived from diagrams and complete a table of results that describes the pattern shown by the diagrams</li> <li>describe how a sequence continues.</li> </ul> </td> </tr> <tr> <td>A24</td> <td>Recognise and use: sequences of triangular, square and cube numbers simple arithmetic progression <u>Fibonacci type sequences</u> <u>quadratic sequences</u> <u>and simple geometric progressions (<math>r</math> where <math>n</math> is an integer and <math>r</math> is a rational number <math>&gt; 0</math>).</u></td> <td>other recursive sequences will be defined in the question</td> </tr> <tr> <td colspan="3">           Students should be able to:           <ul style="list-style-type: none"> <li>solve simple problems involving arithmetic progressions</li> <li>work with Fibonacci-type sequences (rule will be given)</li> <li>know how to continue the terms of a quadratic sequence</li> <li>work out the value of a term in a geometrical progression of the form <math>r^n</math> where <math>n</math> is an integer <math>&gt; 0</math></li> </ul> </td> </tr> </tbody> </table>		Specification content	Specification notes	A23	Generate terms of a sequence from either a term-to-term or a position-to-term rule	including from patterns and diagrams	Students should be able to: <ul style="list-style-type: none"> <li>generate linear sequences</li> <li>work out the value of the <math>n</math>th term of a linear sequence for any given value of <math>n</math></li> <li>generate sequences with a given term-to-term rule</li> <li>generate a sequence where the <math>n</math>th term is given</li> <li>work out the value of the <math>n</math>th term of any sequence for any given value of <math>n</math></li> <li>generate simple sequences derived from diagrams and complete a table of results that describes the pattern shown by the diagrams</li> <li>describe how a sequence continues.</li> </ul>			A24	Recognise and use: sequences of triangular, square and cube numbers simple arithmetic progression <u>Fibonacci type sequences</u> <u>quadratic sequences</u> <u>and simple geometric progressions (<math>r</math> where <math>n</math> is an integer and <math>r</math> is a rational number <math>&gt; 0</math>).</u>	other recursive sequences will be defined in the question	Students should be able to: <ul style="list-style-type: none"> <li>solve simple problems involving arithmetic progressions</li> <li>work with Fibonacci-type sequences (rule will be given)</li> <li>know how to continue the terms of a quadratic sequence</li> <li>work out the value of a term in a geometrical progression of the form <math>r^n</math> where <math>n</math> is an integer <math>&gt; 0</math></li> </ul>			Sequence      Geometric Term            Fibonacci Position $n^{\text{th}}$ term Rule             Common ratio Term-to-        Square term             Triangular Table            Cube Graph            Oscillate Axes             Predict Linear            Simplest form Non-Linear     Surd Difference     Common Constant -    difference difference     Coefficient Ascending     Quadratic Descending    Show Arithmetic Second - difference
	Specification content	Specification notes															
A23	Generate terms of a sequence from either a term-to-term or a position-to-term rule	including from patterns and diagrams															
Students should be able to: <ul style="list-style-type: none"> <li>generate linear sequences</li> <li>work out the value of the <math>n</math>th term of a linear sequence for any given value of <math>n</math></li> <li>generate sequences with a given term-to-term rule</li> <li>generate a sequence where the <math>n</math>th term is given</li> <li>work out the value of the <math>n</math>th term of any sequence for any given value of <math>n</math></li> <li>generate simple sequences derived from diagrams and complete a table of results that describes the pattern shown by the diagrams</li> <li>describe how a sequence continues.</li> </ul>																	
A24	Recognise and use: sequences of triangular, square and cube numbers simple arithmetic progression <u>Fibonacci type sequences</u> <u>quadratic sequences</u> <u>and simple geometric progressions (<math>r</math> where <math>n</math> is an integer and <math>r</math> is a rational number <math>&gt; 0</math>).</u>	other recursive sequences will be defined in the question															
Students should be able to: <ul style="list-style-type: none"> <li>solve simple problems involving arithmetic progressions</li> <li>work with Fibonacci-type sequences (rule will be given)</li> <li>know how to continue the terms of a quadratic sequence</li> <li>work out the value of a term in a geometrical progression of the form <math>r^n</math> where <math>n</math> is an integer <math>&gt; 0</math></li> </ul>																	
		Mathematical questioning should be designed to unpick the structure of the maths and deepen the student's understanding. When students talk about mathematical concepts, they should develop the vital mathematical language that helps them explain their ideas fully.  Students are expected and encouraged to use terminology during all discussions, verbal feedback and in written content.															
<b>What prior learning supports understanding of this content?</b> <ul style="list-style-type: none"> <li>Use and interpret algebraic notation,</li> <li>Simplify and manipulate algebraic expressions (including those involving surds) by:               <ul style="list-style-type: none"> <li>collecting like terms</li> <li>multiplying a single term over a bracket</li> <li>taking out common factors</li> </ul> </li> <li>Understand and use the concepts and vocabulary of expressions, equations, formulae, identities, inequalities, terms, and factors</li> </ul>	<b>How does this content link to future learning?</b> <ul style="list-style-type: none"> <li>Substitute numerical values into formulae and expressions, including scientific formulae.</li> <li>Solve linear equations in one unknown algebraically including those with the unknown on both sides of the equation.</li> </ul>																
<b>Reading:</b> <i>Where in the unit are students supported to read complex academic text?</i> <ul style="list-style-type: none"> <li>Reading and understanding mathematical questions and problems' – teacher input.</li> <li>Decoding complex examination questions - explain what they are asking the student to do' – teacher input.</li> <li>Following instructions to solve problems - break down the tasks – teacher input.</li> <li>Recognising terminology, numbers, and symbols.</li> </ul>	<b>Writing:</b> <i>Independent writing tasks and how they are structured</i> <ul style="list-style-type: none"> <li>Using the correct subject specific terminology for numbers and symbols – examination papers, class books.</li> <li>Responding to questions that ask for an explanation or a reason – examination papers, class books.</li> <li>Self-evaluation, reviewing, reflecting and analysis of own work – class books, personalised learning checklists and analysis.</li> <li>Creating notes that can be used later for revision purposes - class books, revision cards, mind maps etc.</li> </ul>																

**Key assessments:**

How will do students review the information learned?

End of block assessments.

AQA end of block assessments provide a quick progress check at the end of each block of learning to make sure students have understood the content being covered. These are available for both foundation and higher tiers.

End of term/year assessments and mock examinations.

End of term assessments assessing the students' progress towards targets and provide diagnostic information to modify future teaching.

End of year 9 and 10 examinations assessing the students' progress towards targets and provide diagnostic information to modify future teaching.

Two mock examinations seasons take place during year 11 using previous years AQA 8300 examination papers. Students to experience the full suite of papers at both Foundation and higher tiers using Non-calculator and Calculator requirements.

All examinations will explore the three examination papers at both foundation and higher tiers using non-calculator and calculator requirements.

How will feedback be seen?

Marked end of block, term assessments and mock examinations.

Personalised learning checklists for all assessments identifying strengths and areas of development.

Written teacher feedback and marking in compliance with faculty and College Marking Policies. Student responses to marking. Students

self-mark using purple pen. Verbal feedback given every lesson from teacher and peers as appropriate. Teacher and student self-

assessment of presentation of class books will be completed to ensure written work is of high standard and students are achieving their

potential.
